D.M. Dutcher says

Not as good a collection of stories as Cascade Point and Other Stories. The bulk of the book is a novella that simply isn't that interesting. The other short stories are better, but unfortunately I'm seeing a pattern in his second-rate work. Mostly the stories tend to be about a single man working as part of some project, either private or government, and having to try to find a solution to a problem that project causes. Whether its the problems of making a time machine, using voodoo to treat a person's health problems, or mind-based time travel, something always goes wrong with the technology and needs to be fixed.

If you like Zahn, Cascade Point has a much more diverse collection of work.

This was a pretty good one from Zahn. I prefer his actual novels, but the short stories were interesting. Cascade Point was a better set of stories, but I would definitely recommend this book to any Zahn/classic Sci-Fi fans.

Janine Tinsley says

I have yet to find a Zahn book I'm not a fan of, although I didn't quite enjoy this short story collection as much as Cascade Point on the whole. Still, there were some interesting takes on common sci-fi themes, in particular the book's namesake short story, "Time Bomb." I liked the way that Zahn explored the feasibility and effects of trying to time travel.
