Earth and Space: Photographs from the Archives of NASA Nirmala Nataraj , NASA NASA (Photographs) , Bill Nye (Preface)

Take a tour of the universe with this breathtaking collection of photographs from the archives of NASA. Astonishing images of Earth from above, the phenomena of our solar system, and the celestial bodies of deep space will captivate readers and photography lovers with an interest in science, astronomy, and the great beyond. Each extraordinary photograph from the legendary space agency is paired with explanatory text that contextualizes its place in the cosmic ballet of planets, stars, dust, and matter—from Earth's limb to solar flares, the Jellyfish Nebula to Pandora's Cluster. Featuring a preface by Bill Nye, this engaging volume offers up-close views of our remarkable cosmos, and sparks wonder at the marvels of Earth and space.

Earth and Space: Photographs from the Archives of NASA Details

Date : Published October 13th 2015 by Chronicle Books

ISBN : 9781452134352

Author : Nirmala Nataraj , NASA NASA (Photographs) , Bill Nye (Preface)

Format : Hardcover 176 pages

Genre : Science, Nonfiction, Art, Photography, Space

Marcus says

Breathtaking

Genevieve says

Beautiful images and clear captions explaining each. I learned a little about space and the way NASA documents the heavens. Worth it for just looking through the pictures.

Rachel Humphrey says

Lots of Nasa photos with short descriptions to explain where, when and how the photo was taken. Also explains as simply as possible what is occurring in each photograph.

I love Nasa photos, I look them online often. This book didn't seem to have a very clear direction. It's made more like a coffee table book to be flipped open and glanced through. The descriptions are rather dry, for all the beauty in the universe, why simplify it so much that it's just a composite photo and that red stuff is gas. I would have loved to see a flow of photos telling the story of the universe, instead I see random photographs chosen because they look cool. That being said, they chose many of the really good photos to show, especially in the space category.

Lauren W says

Absolutely stunning. Images are fantastic and it's incredible to take a moment and realize that these are fairly "recent" photos. Imagine what is to come with more time, better imagining, and improved hardware to go the distance. This book will blow your mind of what is out there that we are just beginning to see.

Leonard says

Actual color photographs, many of them of objects in deep space taken with the best available technology and they remind us go how beautiful, massive, and mysterious this creation is.

R.K. Cowles says
