The US has launched secret weapons of mass destruction on other countries. And awaits what might be cataclysmic retaliation...

China is devastated by an 8.0M earthquake that leaves 70,000 people dead with hundreds of thousands injured and untold property destroyed. The Chinese government soon learns that it was no natural disaster, but rather an orchestrated attack by the American government using their High Frequency Active Auroral Research Program (HAARP) weapon. China ceases foreign relations with America and creates their own version of the weapon in retaliation. They plan to attack the US by sending a submarine with mini nuke mines to create a massive rupture of the Cascadia Subduction Zone.

But what neither China nor the US knows is that the attack on China was an unauthorized assault perpetrated by a US Navy Vice Admiral. Because of his arrogance and pride, more innocent people may have to pay with their lives.

One of the many coastal towns in peril is Dolphin Beach, Oregon. The new mayor, Willa McBride, tries to protect her townspeople while her sister, the Senator Elizabeth Bechtel, tries to uncover who engineered the attack on China. What is unclear is whether the Senator's goal is aimed toward the greater good or for her own political gain.

To protect the US coast, the government sends out the submarine USS Massachusetts to locate and destroy the Chinese sub. Now it seems the only protection for the American coast is one US submarine and its heroic crew against a truly catastrophic event...

Brandon says

Tsunami Storm turned out to be much more than just a simple disaster tale. A war of weather weapons and disasters, submarine warfare, political rivalry and corruption, and some good character relationships to tie it all together. And, of course, a wicked earthquake and tsunami mowing down buildings and literally beating the crap out of people.

One of the better natural disaster books I've read. I'm also partial to submarine stories, so, I might be a bit biased. But, still, it was entertaining and intelligent enough to keep me reading.

Barbara Hawks says

Disaster is on its way.

Wow what a good book. The best book that I have read in years. I was on the edge of my seat almost the entire time I was reading it. The knowledge of David Capps was incredibly, I truly felt this Tsunami Storm was so real and possible. The story was so believable. What a good book.

Beth says

WOW!

What an intense story! At one point towards the end of the story, I actually had tears in my eyes.

Karen Willis says

Another book that really makes you think of everything the government isn't telling us.

JUDITH DICKINSON says

While this is a fantastic read it is also a little scary. The USA and China have developed technology that enables them to influence the weather. There are also natural disasters occurring with suggestions of man-made influences. Science threatens mankind and the challenge is on to meet the threat and divert it. While the story itself is fictional, there is enough in the scientific detail to make it all so believable. There have been suggestions in the past that the weather could possibly be controlled. This narrative is so readily acceptable that it gives the reader pause for thought. How far removed are we from these threats and have we any way to counter them. A thought-provoking read.

Michelle Kaeding says

Couldn't put it down

This was more enjoyable than Hunt for Red October! If you are a disaster reader like myself, you will want to read this one for sure.

Joanne says

I loved this book. The author takes four separate story lines and interweaves them to create an intense and scary novel. I assume all the submarine stuff was accurate because the author used to work on one. Those scenes were some of the most detailed, graphic, and tension-filled of the whole novel.

A rogue element of the US government (just three men) uses a secret weapon to cause devastation in China. Then China decides it is going to retaliate and we learn about all their plans. While this is going on, a town along the Oregon coast is undergoing disaster training "just in case", and a young woman is working in the torpedo room of the USS Massachusetts.

All of these stories intersect and you don't know whether World War III is starting or even if the US will still exist in its current status in the world. What is most scary about the book is that so few people in the government can bring the world to the brink of war. I have no idea if the weapons described actually exist, but I hope not. Unfortunately, if they don't now, they probably will in the future.

As I stated earlier, the action aboard the submarine is the most riveting part of the book. It is amazing to hear these highly-trained officers and crewmen perform their jobs with courage and brilliance. They play cat and mouse with a Chinese submarine and the dialogue and actions taken by the crew are so vividly described that you feel like you can see their faces and hear their voices and feel the fear of being in a submarine, under the water, where they are alone and under intense pressure. You can also sense the courage and willingness of the crew to do anything to protect their ship and their crewmates.

I highly recommend this book. It is both a warning of the implications of unmitigated power and an awesome submarine adventure. It will also leave you with the knowledge of how precarious peace, the economy, and governments are, which is probably the scariest part of the book.

Alex McGilvery says

Tsunami Storm is both a disaster novel and a war novel. The US has developed technology to control the weather and cause earthquakes. Someone in the middle management of the various covert agencies decides to use the technology to punish the enemies of the United States, namely anyone who doesn't recognize them as the world leaders. When an earthquake in China is traced by Chinese scientists to the US technology a new arms race is on involving weapons which don't officially exist.

Like most books of this type the first part of the book is about setting up the characters and locations for the disasters and the people who will be the villains or heroes of the day. The characters are likable if a little

predictable, and the tension around the final big disaster is well managed.

This is a good read if you're looking for some escapism and some really good descriptions of the sub battle and disasters.

EJ Roberts says

This book was well written and on par with Tom Clancy. As a matter of fact, if you like Tom Clancy, you'll enjoy this book. There's enough technical data and thought behind everything to keep the more well-informed thinkers out there happy, while it wasn't so overloaded it would keep a more relaxed reader away. I would liken this book to a roller coaster ride. The excitement at the very beginning when you strap in to begin and then the climb to the top. During the climb, you get to meet all of the players and become invested in their lives and what's going on with them. You begin to feel for them because you know what's going to happen. Then, at the halfway point, hang on! You're not going to want to put the book down.

The author did a great job moving through the five different viewpoints that are represented in this book. He keeps you interested in what's going on and how it's going to affect everyone involved. The idea that the US government could possibly pull this off, and with such a massive retaliation from China, is realistic. We already believe the government is too big and can't keep track of itself and what one lone person might be able to do if he or she wields too much power with an object such as the HAARP.

My biggest complaint about this book is the ending. It could have ended sooner than it did. Outside of that, I enjoyed every minute of reading it and even cried a bit at the end. I don't do that often, so excellent job, DF Capps. This is definitely an author to keep an eye on in the future.

Cindy says

As Good As Tom Clancy

This is a really good book! It really made me wonder about disasters that happen around the world. Good characters, very well developed. At first it is very slow moving as the author sets up the story line, but then it moves quickly.

As the wife of a retired Navy Submariner, the author does a good job of depicting the life on a submarine.

There are heroes and one man you'll be glad to see get what he deserves.

I recommend this book! Great read!

Rosemary says

Tsunami Storm - a review by Rosemary Kenny

Political puppet master Vice-Admiral James Billingsly has corruptly misused the HAARP device created by US Government scientists to launch an apocalyptic earthquake in China, that ends up with more than 70,000 dead, hundreds of thousands injured and millions homeless in this 'what if...?' scarily realistic future world scenario that could almost be non-fiction, so accurate are the technical and natural world details within this fantastically readable novel by D.F Capps - the new modern classic writer of our age.

Naturally China retaliates by inventing a similar weather-control device, that it threatens to unleash on the

Pacific Seaboard of the US, that it considers the aggressor, despite presidential and Government denials. Can the truth be uncovered and the terrifying possibility that there will be incredible loss of life and property on continental America be averted? Only one submarine and one intrepid commander - Tiffany Grimes and her crew of the USS Massachusetts - can make the vital difference, but will they arrive in time to avert disaster?

Meanwhile can Mayor Willa McBride save her new family-like community in Dolphin Beach, which stands in the direct path of the eponymous tsunami storm that will destroy them all if not averted or stopped altogether? And what agenda does her sister, Senator Elizabeth Bechtel or Oregon have in seeking the perpetrators - true altruism to save her beloved country's citizens? Or a secret personal one, that will further her huge ambitions for higher office?

To find out these answers and enjoy a 'could be' alternate reality future for the world, due to global warming and pollution damage, that will make you think what values you really hold dear.

Definitely a 5-star winner for your bookshelf by D.F Capps...get your copy today without delay!

Cried on the way to work (I vanpool)... That's not embarrassing at all..

Sharon says

What a scary story. Scary because I can see it really happening. This story had good characters that i cared about. It was a little like clancy with too much technical details for me, but it didn't detract from the story.

I really enjoyed reading this book.

Hopefully, that earthquake/tsunami never happen.

Elizabeth says

this is the first book of his that I've ever read and I loved it, loved every thing about it , loved how it kept me coming back for more of the story, had me on my edge of my chair as well as my bed. can't wait to see what more of his books are like when I can

Kathryn Mercer says

I consider this to be a Must Read Story for Every American Citizen!

Too few of us are aware of the politics and technology of the world we live in today. In addition, few of us even realize the highly precarious position of the U.S. monetary/debt and how this inter-relates to our status as a world power.

It would be my recommendation that this finely written novel be a must read in High Schools across America the same as "1984" by Orson Wells was when I was in school!

This is a very well written and thought provoking "story."
